Bryan Johnson's Influence Through a Christian Lens

In 2013, American entrepreneur Bryan Johnson made a fortune by selling Venmo to Paypal for 800 million dollars. With his money, Johnson decided to put together a team of researchers to find ways to reverse his biological age.¹ The project is called "Project Blueprint" which began in 2021, and Johnson famously spends two million dollars per year on his anti-aging protocol.² Since then, Johnson has advocated for his lifestyle and philosophy, amassing over two million subscribers on Youtube and almost 14,000 "citizens" in his "Don't Die" community.³ Due to Johnson's focus on using technology to manipulate human biology, he can be compared to a movement known as transhumanism. Transhumanism is a movement supporting technology that radically improves human capability and health to the point of surpassing human limits.⁴ As Johnson gains popularity, especially in the US, it becomes more apparent that his transhumanist ideas will interact with the most popular religion in the US, Christianity.⁵ This is a problem because Christian theology tends to oppose transhumanism due to their differing views on human limitation and death. For example, a Christian might see

pursuing immortality on Earth as pointless when there is already immortality in heaven, or they might believe that altering the human body to live forever would be “playing god.”⁶ Dorothy Boorse, a Professor at Gordon College, provides a valuable perspective in understanding how Johnson’s ideas interact with Christian theology because of her experience focusing on the intersection of science and Christianity.⁷ For example, she has a website with resources for helping people learn about how science and Christianity coexist.⁸ Evaluating Johnson’s actions with the aid of Boorse’s research reveals that Johnson’s heavy advocacy for good health aligns with the Christian goal of caring for others, especially because of his positive impact on the health of his audience. However, the investigation also suggests disingenuous motivation behind his philanthropy. Finally, on the philosophy side, Johnson’s ideas do not align with Christian views from Boorse’s research and are revealed to have negative consequences for everyone, not just Christians.

Johnson’s movement is effectively a transhumanist movement despite his apparent desire to be separate from transhumanism. In an interview with *TIME magazine*, Johnson said, “I don’t talk about transhumanism. All these future-oriented, forward-looking contemplations are a luxury of thought.”⁹ Johnson seems to criticize transhumanism for being unrealistic and wants to be separate from it. However, his philosophy actually relies heavily on transhumanist ideas. For example, on Johnson’s Don’t Die website, he writes, “On the eve of the AI singularity, now is the time to achieve a human singularity and secure our species’ future.”¹⁰ “The singularity” is a hypothetical moment in the future where AI becomes smarter than humans, leading to rapid,

¹⁰ Don’t Die. <https://dontdie.com/>.

unpredictable technological growth and changes in the world. It is an idea popularized by transhumanist Ray Kurzweil.¹¹ Johnson is essentially saying that his Don't Die movement will help humanity survive the singularity, which seems to be taking this idea very seriously despite criticizing transhumanism for being a "forward-thinking" "luxury of thought." Moreover, Johnson's philosophy also relies on "superintelligence," which is an idea created by one of the founders of the World Transhumanist Association (Humanity+). Superintelligence is a hypothetical AI that is smarter than humans in every way.¹² While arguing in a Youtube video that "Ending death should be humanity's #1 objective," Johnson claims "we are giving birth to superintelligence," which will be the key to achieving biological immortality.¹³ Despite Johnson's criticism of transhumanism, his reliance on "the singularity" and "superintelligence" to justify his work aligns Johnson with mainstream transhumanist thought.

If we compare Johnson's popularity to transhumanism's popularity in the past, it's clear that Johnson has one of the largest transhumanist followings ever. On June 17th, 2024, Johnson hit one million subscribers on Youtube. As of April 25, 2026, he has 2.12 million, gaining around 53 thousand subscribers every month for the past eighteen months.¹⁴ Comparatively, the World Transhumanist Association (Humanity+), a prominent transhumanist organization since 1998, has only a few thousand followers across X, Instagram, LinkedIn, and Youtube.¹⁵ Even Ray Kurzweil's book, *The Singularity Is Near: When Humans Transcend Biology*, which largely

popularized transhumanism before Johnson, has sold a mere quarter million copies compared to Johnson's following of over four million across X, Instagram and Youtube.¹⁶ Johnson's constant advocacy of transhumanist ideas with his massive growing audience makes him one of the most relevant people to examine when trying to understand how transhumanism might interact with Christian theology.

Johnson's transhumanist ideas, however, appear to be driven by self-interest rather than something that aligns with Christian ideals. On February 12th, 2026, Johnson started an "Immortals" program. For one million dollars per year, three accepted applicants will get to follow Johnson's exact longevity protocol.¹⁷ This comes across as hypocritical after he said, "what I'm arguing is it's not for a few rich people. This is- society is systematically killing itself." This is in response to being asked what he thinks about rich people being able to buy into Don't Die more than everyone else. His reply is based on how fast food is engineered to be addictive, which is "systematically killing" society.¹⁸ While this may be true, the money required for his Immortals program does not seem conducive to promoting that his argument is "not for a few rich people." Rather, it makes him seem disingenuous and money-driven.

Another activity from Johnson that seems driven by self-interest is his psilocybin Youtube livestream. Psilocybin, commonly known as magic mushrooms, is a hallucinogenic drug that was shown to have life extending effects on mice and human cells.¹⁹ Johnson was

hoping to capture any signs of life-extending effects by scanning his brain during the livestream using Kernel, a neurotech company which Johnson founded.²⁰ In a Youtube video about the experience, which he released after the livestream, he seemed to dramatize his situation while simultaneously advertising Kernel. He was concerned about how the experience will change him, but he anticipated groundbreaking results that are worth the risk.²¹ This framing of the situation is contrasted by the actual livestream he did months before, where he seems to be thoroughly enjoying the experience. When asked how he was feeling right before taking the drug, he said, “Great. I’m really excited. I’m ready for this.”²² Johnson’s excitement makes it plausible that he framed the situation as a heroic risk to justify his underlying desire to take psilocybin. According to friends of Taryn Southern, Johnson’s ex-girlfriend, Johnson had frequently taken psychedelics in 2016.²³ However, in that dramatic Youtube video, Johnson gives the impression that he doesn’t have experience with psychedelics.²⁴ This suspicious behavior paired with the fact that he advertised his own company, Kernel, at the same time, makes Johnson’s endeavors to improve people’s health seem disingenuous.

In addition to using his health endeavors to advertise Kernel, Johnson has also monetized his very own protocol. In 2024, Johnson started Blueprint, a business where he sells Project Blueprint as a nutrition product. Although Johnson publicly shares Project Blueprint’s nutrition information so that his audience can make it themselves, he said he started selling it to simplify

the process of obtaining all the ingredients, and he claims it is cheaper.²⁵ After less than a year, though, controversy surfaced around the company and Johnson. In an interview with Katie Drummond for *WIRED magazine*, Drummond confronted Johnson about a *New York Times* article that revealed Blueprint was causing health problems with customers. The article revealed that Johnson had made confidentiality agreements with employees that restricted them from speaking out about it. She asked Johnson if the controversy is part of the reason he is close to shutting down the business. To this he said, “[their reporting on] the business, that was fucking made up. They take things and they contort it to fit their narrative, but anybody who’s been on the side of a hit piece knows it’s bullshit.”²⁶ Johnson’s hostile denial of the evidence makes him seem untrustworthy, especially considering that the *New York Times* reviewed “legal and internal documents as well as [interviewed] 30 people close to Mr. Johnson and his company.” They said, “We are confident about the accuracy of our story.”²⁷ If Johnson is as concerned as he says about the health of his audience, one might expect him to instead mention what he is doing to ensure the safety of his product rather than insult the source of the controversial evidence. Overall, analyzing Johnson’s actions reveals that he may not be as philanthropic as he wants to seem. From his hypocrisy around the Immortals program to his suspicious activity with psychedelics to the controversy around Blueprint, he repeatedly exhibits behavior that looks like he is driven by self-interest. Because of this, people should be cautious about what Johnson sells and the philosophy he promotes.

Dorothy Boorse’s extensive work on the relationship between science and Christianity offers valuable insight to evaluate the merit of Johnson’s work for both Christians and the wider

population. On her website, dorothyboorse.com, she has a section titled “Resources for Science and Faith Matters” which is an organized list of papers, books, websites, and organizations that can help people understand how Christianity and science coexist. Sources range from Christian websites to NASA. On this page, she also doesn’t try to impose her own views on the reader, which highlights her integrity. Her comments on sources are sparse, brief, and usually objective, which allows the reader to come to their own conclusions. For example, Boorse comments on a book, writing, “This is an interesting main idea. Whether it is correct or not, I don’t know.”²⁸ As a biologist and a Christian, Boorse takes insight from various perspectives for her research. In one such publication, “Anti-Aging: Radical Longevity, Environmental Impacts, and Christian Theology,” Boorse looks at many perspectives to understand the impact of technologies that increase life span. While doing so, she distinguishes secondary longevity from primary longevity: Secondary longevity means an individual survives non-age related diseases so that they live out their expected lifespan. On the other hand, primary longevity means the individual increases their expected lifespan.²⁹ This paper from Boorse is particularly useful in understanding the impacts of Johnson’s movement and his endeavors to live longer.

Despite Johnson’s shortcomings, the majority of his influence on the physical health of his audience aligns with Christian views from Boorse’s paper. A large portion of Johnson’s content online is promoting basic health habits. Many of his videos have transhumanist themes with titles such as “How To Live Longer Than 99% Of Humanity” or “How to Make My Anti-Aging Lunch (Live to 120+).” One might expect these videos to contain transhumanist propaganda, strange therapies, or inaccessible technology. However, while he does use expensive

²⁹ Dorothy Boorse. “Anti-Aging: Radical Longevity, Environmental Impacts, and Christian Theology.” *Perspectives on Science and Christian Faith* 57, no. 1 (2005): 55–64. EBSCOhost. research.ebsco.com/linkprocessor/plink?id=d475447a-5f55-34bb-874b-e963ca0e6320.

technology frequently, and he tries strange therapies such as taking psychedelics, much of his content, including these videos, just promotes good, well-explained health advice. For example, in his video, “How To Live Longer Than 99% Of Humanity,” he says, “sleep is your number one priority.” This is a recurring theme of his content—he often pushes his audience to have good sleep habits. He also talks about the importance of exercise and nutrition and gives encouraging advice on how to make health habits easier.³⁰ This aligns with Boorse’s belief that secondary longevity should be prioritized: “I believe we should promote anti-aging technologies which increase secondary longevity.”³¹ By actively calling for better health habits and offering helpful, basic, research-based advice, Johnson is frequently aligned with this insight from Boorse.

Johnson is also aligned with Boorse’s Christian values of “caring for our neighbors” and “caring for the world” because of the way he promotes his cause and the way he is viewed by his audience.³² For example, in his Youtube video, “I’m Scared for Our Country,” he documents his visit to the White House where he addresses accessibility issues with healthcare in the US. He says, “My goal is to tell Congress that I’m not there to reform healthcare. I’m there to replace it.” This video is well received by his audience with the most popular comment saying, “Finally a rich person actually fighting for the sake of humanity.”³³ Johnson often frames himself in this way as a charitable person. When asked in an interview with *CNN* on why he started Project Blueprint, he says that his own history of depression makes him very sympathetic towards

people with disorders.³⁴ By promoting his health advice in these philanthropic and benevolent ways, Johnson seems aligned with the Christian values that Boorse highlights. On the other hand, his history of hypocritical and suspicious behavior suggests that his appearance as a servant of the people could be a “version of self-aggrandizement.”³⁵

Despite Johnson’s intentions to improve health in the US, his research efforts often fall flat because of his lack of sample size. Even though Johnson says his experimentation is for the well-being of everyone, he only tests on himself for the most part. This is a problem because it makes his findings less widely applicable and is a consistent problem with all of his research. He also does multiple therapies at the same time, which can make interpreting the data more difficult.³⁶ This could be one reason why his efforts to have Congress use Project Blueprint to replace the healthcare system fell flat. Johnson certainly has the means to conduct research with a larger sample size, but instead, he exclusively tests therapies on himself or occasionally on family or friends.³⁷ This self-focused research further supports the idea that Johnson is driven by self-interest rather than Christian-like compassion for others.

Furthermore, Johnson’s overall goal of achieving biological immortality is problematic when evaluated through Boorse’s work. Johnson claims that “the evolutionary pressure presented by advances in AI, a changing biosphere, and unforeseen and unpredictable future events invite no- demand that we improve our speed of evolutionary adaptation.” He promotes his Don’t Die movement as the solution to these problems.³⁸ However, Boorse’s research on anti-aging

technology cautions that pursuing biological immortality could have a similar, environmentally harmful effect as past scientific breakthroughs. For example, himalayan yew tree bark, which contains a compound used in chemotherapy, was overcollected and is now endangered. Boorse also highlights that the invention of biological immortality would change population growth rates, leading to an increase in resource consumption that could cause environmental harm.³⁹ It is also confusing why Johnson believes not dying will speed up human evolution since the theory of evolution itself is driven by changes in DNA throughout thousands of generations. He fails to elaborate on this claim, but it's possible that Johnson believes we will be able to alter our own DNA and actively change our bodies. However, to this idea, Boorse highlights theologians' views on pursuing immortality as similar to the builders of the Tower of Babel. This frames transhumanist pursuits as disrespecting the divine.⁴⁰ Boorse also finds that people who are passionate about primary longevity tend to "emphasize individual benefits" and "de-emphasize the social impacts"⁴¹ similar to how Johnson tends to act self-interested. Overall, Boorse does not find many benefits to primary longevity other than satisfying, "I would like to live a little longer." Meanwhile, she finds many concerning drawbacks for all of humanity that include environmental concerns, over-population concerns, accessibility issues, economic issues, healthcare problems, and social dilemmas.⁴² There seems to be little benefit of achieving biological immortality compared to the potential problems it would cause. For this reason,

⁴² Dorothy Boorse. "Anti-Aging: Radical Longevity, Environmental Impacts, and Christian Theology." *Perspectives on Science and Christian Faith* 57, no. 1 (2005): 55–64. EBSCOhost, 58–59. research.ebsco.com/linkprocessor/plink?id=d475447a-5f55-34bb-874b-e963ca0e6320.

Boorse believes that it is not currently beneficial to pursue primary longevity before these issues are resolved, especially when much of the world is still struggling with secondary longevity.⁴³

Overall, Johnson's endeavors with Project Blueprint and his Don't Die movement showcases the ways transhumanist ideas continue to shift and grow alongside the growth of science and technology. By using Boorse's research to understand Johnson's work, we demonstrate the importance of using various scientific and religious perspectives. We also discover that Johnson repeatedly behaves in a self-interested way, which is only complimented by his lack of awareness for the negative long term effects that his endeavors could have for society. Although Johnson has an undeniable positive impact on the health of his audience, he fails to follow through on his altruistic facade when faced with controversy, making himself seem even less trustworthy. It is important to keep in mind that, although Johnson and Boorse each represent popular groups in the worlds of transhumanism and religion, they are only parts of these worlds which are constantly shifting. The Christian Transhumanist Association is a perfect example of how these worlds shift and even merge with each other, demonstrating the complexity of this conversation.⁴⁴
